

# PREVENTION OF SKIN IRRITABILITY

UNE-EN ISO 10993-10

The absence of dermal irritability of Regenactiv fabric shown by analyses reflects that its ability to protect the skin is substantially even greater than that required by the established standards that are taken as a reference in the study.

A dermal irritation = 0 (UNE-EN ISO 10993-10) and an **absorption capacity of exudate** or perspiration of at least 2.89 g/g of plain fabric and 4.40 g/g of terry fabric have been in turn demonstrated.
